## **ABSTRAK**

Kementerian Kelautan dan Perikanan (KKP) telah menetapkan beberapa kampung nelayan di seluruh Indonesia sebagai kampung kalaju, salah satunya adalah Desa Cikiruhwetan, Kabupaten Pandeglang, Provinsi Banten. Namun, pengembangan kampung kalaju di Desa Cikiruhwetan belum optimal, sehingga belum terlihat perbedaan antara kampung kalaju dan non-kampung kalaju. Oleh karena itu, dalam rangka mengoptimalkan pengembangan kampung kalaju, masyarakat kampung kalaju perlu dibekali dengan berbagai pemahaman yang dapat meningkatkan kemampuan mereka, terutama kemampuan di bidang perikanan tangkap. Peningkatan pemahaman dilakukan dalam bentuk pelatihan atau bimbingan teknis yang melibatkan masyarakat nelayan dan pegawai dinas serta perangkat desa. Perubahan atau peningkatan pemahaman diuji dengan menggunakan pertanyaan tertulis yang diberikan pada awal pelatihan (*pre-test*) dan pada akhir pelatihan (*post-test*). Berdasarkan hasil evaluasi terhadap hasil *pre-test* dan *post-test* dapat dilihat bahwa terdapat peningkatan pemahaman masyarakat nelayan terhadap materi yang diberikan. Meskipun peningkatan pemahaman tersebut belum optimal, namun hal tersebut dapat dilakukan melalui pelatihan secara berkala.

Kata kunci: desa kalaju, pengabdian masyarakat, pelatihan masyarakat, Pandeglang

## **ABSTRACT**

The Ministry of Marine Affairs and Fisheries (KKP) has designated several fishing villages throughout Indonesia as kalaju villages, one of which is Cikiruhwetan Village, Pandeglang Regency, Banten Province. However, the development of kalaju village in Cikiruhwetan Village has not been optimized, so there is no visible difference between kalaju village and non-kalaju village. Therefore, in order to optimize the development of kalaju village, the village community needs to be equipped with various understandings that can improve their abilities, especially abilities in the field of capture fisheries. The improvement of understanding is carried out in the form of training or technical guidance involving the fishing community and agency employees and village officials. Changes or improvements in understanding were tested using written questions given at the beginning of the training (*pre-test*) and at the end of the training (*post-test*). Based on the evaluation results of the *pre-test* and *post-test* results, it can be seen that there is an increase in the understanding of the fishing community on the material provided. Although the increase in understanding has not been optimal, it can be done through regular training.
